

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

An Extract of Monsieur Christian Hugen de Zulichem his Letter to the Publisher, of the 15th of May 1674. from Paris; touching his Thoughts of Mr. Hook's Observations for proving the Motion of the Earth, not long since printed by Mr. Martyn, and taken Notice of in Numb. 101. of these Tracts.

— **T**HE Observations of Mr. Hook for finding out the Motion of the Earth are very good, and of great Consequence; but they must be continued, to see, whether in the Course of one or more Years the *Parallaxes* do regularly answer to the Annual Motion of the Earth. To which we also shall contribute our Labours; and the Vault, that is in our Observatory, being 28 Fathom deep, will in Time be very useful for that Purpose. This, if it succeed, will prove an almost entire Conviction of the *Anti-copernicans*, since there will remain for them nothing but this un-grounded Subterfuge, to say, that the Center of the Sphere of the fix'd Stars continually changes its Place for an Annual Motion.

An Extract of another Letter, written by Seignior *Cassini* to the Publisher, relating to the same Subject, dated June 28. 1674. Which we shall insert here in the same Language, 'twas written in.

— **N**on poterat, meo judicio, D. Hookius aptiori methodo *Parallaxes Orbis annui in Fixis investigare, nec aptiorem ad eam investigationem eligere Stellam, quæ ex lucidioribus & vertici proxima esset, & à polo Zodiaci non remota. Nec inuilis fuit viri doctissimi conatus, cum diversitatem invenerit ad eam partem, ad quam exigit Parallaxis.*

Nostræ equidem Observationes nihil adhuc adeo liquidum hoc in genere exhibuere, licet in Fixarum Altitudinibus meridianis, variis anni temporibus, deprehenderemus differentias alias ab iis, quæ ad promotionem Fixarum ex Æquinoctiorum præcessione consequuntur. Nondum tamen, quas ad hanc rem præmeditati sumus Observationes, exequi potuimus.

Pateam

*Puteum habemus in Observatorio ad id paratum, per fornicum-
jovamina cælo pervium, altitudinis à fundo, quò scala commodè du-
cit, pedum fermè ducentorum, sed operibus fabrorum, supremum for-
nicem fulcientibus, adhuc impeditum. Itaque nihil nobis per eum
hactenus tentare licuit. Gratias interim Tibi ago maximas, Vir
Clarissime, pro communicatis D. Hookii Observationibus, quæ no-
bis majori erunt incitamento ad correspondentes instituendas. Vale,
& me ama.*

*Observations concerning the Comet that was seen in Brasil, An.
1668. in March, by P. Valentin Estancel a Jesuit, and by him
sent to Rome; where they were printed in the 9th Italian Gior-
nale de Letterati, Septemb. 31. 1673.*

THis being the same Comet with that, taken Notice of in
Numb. 35. of these Tracts, and our Account, then given
of the same, being likely to receive some Advantage and Light
from these Observations, made in *Brasil*, and but lately come
to our Hands, we thought it would not be un-acceptable to the
Curious in *England*, to see them English'd out of the *Italian*,
and here inserted. They are as followeth;

There hath not been a *Phænomenon* this great while, of which,
as of this, I am now going to describe, we have had Observations
from all Parts of the World. Those from *Europe* and *Asia* may
be seen in our 3d and 4th *Giornale*. Now I have received those
of *America*, made in the City of *St. Salvador*, in the Southern
Latitude of 12 deg. 47 min. Likewise the Jesuit P. *Pietro Su-
sarte*, Rector of *Macao*, in the *East-Indies*, well vers'd in Mat-
ters Astronomical, writes to have seen the same all along the
Coast of *Bona Speranza*, though he communicates no particu-
lar Observations, because he wanted Instruments to make accu-
rate Ones, and to see the *Head* of this Comet.

To come then to the *Brasilian* Observations, it hapned, that
on the 5th of *March* 1668. (*st. n.*) at 7 a Clock at Night, the
Sun being then in *Piscis*, Father *Estancel* began to see this Co-
met a little above the Horizon from West to East-South-East.
That which somewhat surpris'd him was, that at the very
Beginning it appear'd in its greatest Bulk, and with extraordi-
